

# JIGISHA BHOLE

LinkedIn | (339)-242-3106 | bhole.j@northeastern.edu | Open to relocate

Software Engineer with 3+ years turning complex requirements into production-ready systems using Java, Spring Boot microservices, cloud-native AWS, and full-stack React. Experienced in distributed systems, event-driven architectures, AI driven solutions, and enterprise-scale APIs with a strong focus on scalable code, clean architecture, and code quality

## WORK EXPERIENCE

**Software Engineer Intern** | Ribbon Communications, USA Sep 2025 - Dec 2025

- Architected a serverless AWS pipeline using Lambda, SNS/SQS, Glue, S3 Parquet ingesting 10,000+ daily events across distributed multi-tenant microservices, automating ETL pipeline and reducing manual processing overhead by 80%
- Built a multi-agent SRE system using CrewAI with specialized detection, diagnosis, and mitigation agents orchestrated via a state-machine layer and a stack-based Undo Agent to revert failed actions in dependency order, preventing unrecoverable states across 10-20 fault scenarios in live cloud environments
- Implemented an NL2Kubectl layer with Llama 3:8B agents to issue Kubernetes remediation commands with linting and oracle-based guardrails and integrated observability pipelines for automated fault localization achieving 70-85% SRE mitigation success rate

**Software Engineer** | Finastra, India Aug 2023 - Feb 2024

- Developed end-to-end payment workflows in Java and Spring Boot, implementing business rule execution, message transformation, and MQ-based routing with under 1ms latency, processing 5M+ daily transactions
- Migrated a legacy batch payment processor to an event-driven architecture using Kafka and SpringBoot microservices, enabling continuous transaction processing and eliminating end-of-day batch delays
- Built full-stack liquidity dashboards in Angular and Spring Boot, integrating transaction and account services with role-based access control for real-time fund position visibility
- Optimized SQL stored procedures via query restructuring and table partitioning, reducing execution time from hours to minutes, an 80% improvement that directly unblocked a high-priority client delivery

**Senior Software Engineer** | Xoriant Solutions Pvt Ltd, India Aug 2020 - Aug 2023

- Optimized Java Spring Boot microservices and Oracle SQL query performance across 25M+ record data, reducing average response time by 45% through index restructuring, and service-level caching
- Led root cause analysis on production incidents across distributed services, implementing systemic fixes that reduced recurring defects by 40% and cut on-call escalation volume
- Enabled zero-downtime deployments across multiple client environments by automating CI/CD pipelines with Jenkins and Git within an Agile delivery model

## TECHNICAL SKILLS

|                              |                                                                                                                                  |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages:</b>            | Java, Python, JavaScript, TypeScript, Bash/Shell                                                                                 |
| <b>Backend:</b>              | Spring Boot, Node.js, FastAPI, Kafka, JMS, REST APIs                                                                             |
| <b>Frontend:</b>             | React, Angular, React Native, HTML5, CSS/SASS, D3.js                                                                             |
| <b>Databases:</b>            | Oracle, MySQL, PostgreSQL, MongoDB, XML, JSON                                                                                    |
| <b>Cloud/DevOps:</b>         | AWS (EC2, S3, RDS, Lambda, ECS, Step Functions, ALB, CloudWatch), Terraform, Cloud-Formation, Docker, Kubernetes, GitHub Actions |
| <b>Systems/Architecture:</b> | Microservices, Event-Driven Architecture, SOA Architecture                                                                       |
| <b>AI/Developer Tools:</b>   | LLM Agent Orchestration, Scikit-learn, GitHub Copilot, Claude Code, Windsurf                                                     |

## PROJECTS

**Replate AI** | *Python, FastAPI, React Native, Node.js, Firebase, OpenAI API, GitHub Actions*

- Built a React Native/TypeScript app with Google Vision API ingredient recognition, LLM-powered recipe generation, and real-time Walmart Grocery API pricing
- Architected dual-backend (Node.js/Express + Python FastAPI) with Firebase auth, AWS S3, and a centralized inventory module enforcing single-source-of-truth across components
- Maintained code quality via modular service separation, Jest unit tests, and GitHub Actions CI/CD pipeline with zero-downtime AWS deployments

**CloudFileVault: Cloud Native Application** | *AWS, Node.js, REST API, Terraform, GitHub Actions, PostgreSQL*

- Built a highly available Node.js file storage service on AWS with Auto Scaling Groups across multiple availability zones, ALB, and S3 encryption, load-tested to handle 500+ concurrent requests with zero-downtime deployments
- Implemented end-to-end CI/CD pipeline using Terraform and GitHub Actions, automating infrastructure provisioning (IAM, KMS, AMIs, ASG) and triggering rolling deployments with automated health checks

## EDUCATION

|                                                                                     |                                         |
