JIGISHA BHOLE

LinkedIn | (339)-242-3106 | bhole.j@northeastern.edu | GitHub

Software Engineer with 3+ years building full-stack Java Spring Boot and React/Angular applications, with a strong background in payment processing platforms and financial microservices. Experienced delivering production-grade, scalable systems in fintech environments with a focus on clean architecture, test coverage, and code quality.

EDUCATION

Master of Science in Software Engineering Systems — Expected Aug 2026
Northeastern University — GPA: 3.66/4

Bachelor of Engineering in Computer Engineering — Aug 2016 - May 2020
Savitribai Phule Pune University — CGPA: 9.04/10

WORK EXPERIENCE

Software Engineer Intern — Sep 2025 - Dec 2025
Ribbon Communications, USA

- Designed and built SOC 2 compliant Python/Lambda audit logging service on AWS, ingesting high-volume event streams from distributed microservices via SNS/SQS into S3/Athena-queryable Parquet datasets
- Built serverless pipeline (Lambda, Step Functions, Glue, S3) transforming raw event streams into analytics-ready Parquet datasets, deployed on Kubernetes-managed ECS clusters
- Developed LLM-powered Python AI agent for incident management—automated fault detection, root cause analysis, and remediation across distributed services, eliminating manual triage for 6+ incident categories

Software Engineer — Aug 2023 - Feb 2024
Finastra, India

- Built full-stack features for structured payment workflows spanning multiple clearing types and bank routing logic, fund-level capital tracking dashboards using Java, Spring Boot REST APIs and Angular
- Modernized a monolithic batch processor into Kafka-based event-driven microservices, reducing end-to-end payment processing time by 35–50% and enabling near real-time execution
- Developed MT-to-MX message transformation microservices in Java and Spring Boot, implementing XML schema validation, data mapping, and format conversion pipelines processing 5M+ payment messages daily
- Built Angular dashboards integrating Spring Boot REST APIs with external clearinghouses and settlement networks, ensuring clean separation of concerns and high test coverage
- Secured internal REST APIs using OAuth 2.0 and Spring Security, managing token-based authentication flows for service-to-service communication across the payment platform

Senior Software Engineer — Aug 2020 - Aug 2023
Xoriant Solutions Pvt Ltd, India

- Improved query performance across 25M+ record Oracle datasets by 45% by optimizing Java Spring Boot microservices with JPA/Hibernate ORM through index restructuring and service-level caching
- Designed Oracle schemas and PL/SQL stored procedures for high-volume transaction lifecycles, settlement workflows, and configurable business rule engines supporting multi-tenant deployments
- Led root cause analysis on production incidents across distributed services, implementing systemic fixes that reduced recurring defects by 40% and cut on-call escalation volume
- Managed CI/CD pipelines using Jenkins and Git within an Agile/Scrum delivery model, automating builds, tests, and deployments across multiple client environments with zero-downtime rollout strategies

TECHNICAL SKILLS

Languages:	Java, Python, JavaScript, TypeScript, Bash/Shell
Frontend:	React, Angular, React Native, HTML5, CSS/SASS, D3.js
Backend/Data:	Spring Boot, Spring MVC, Node.js, Kafka, JMS, REST APIs
Databases:	Oracle, MySQL, PostgreSQL, MongoDB, XML, JSON
Cloud/DevOps:	AWS (EC2, S3, RDS, Lambda, ECS, Step Functions, ALB, CloudWatch), Terraform, CloudFormation, Docker, Kubernetes, GitHub Actions, Jenkins
Systems/Architecture:	Microservices, Event-Driven Architecture, SOA Architecture
Testing & Tools:	JUnit, Mockito, Jest, PyTest, Gradle, Elasticsearch

PROJECTS

CloudFileVault: Cloud Native Application | *AWS, Node.js, REST API, Terraform, GitHub Actions, PostgreSQL*

- Highly available file storage on AWS (ASGs, ALB, S3 encryption, PostgreSQL); load-tested to 500+ concurrent requests with zero-downtime Kubernetes deployments.
- End-to-end CI/CD via Terraform and GitHub Actions—automated IAM, KMS, AMI, and ASG provisioning with rolling deployments and automated health checks.

BudgetBuddy: Group Expense Application | *React, Node.js, OPEN API, Chart.js, MongoDB*

- Built a full-stack group expense management app using React and Material UI with Node.js/Express REST APIs, MongoDB aggregation pipelines, and Chart.js data visualizations
- Integrated OpenAI APIs for automated receipt parsing and expense categorization, and secured backend services with JWT-based authentication and role-based access control
