EDUCATION

Master of Science in Software Engineering Systems

Northeastern University

Expected Aug 2026

GPA: 3.66/4

Coursework: Program Structures and Algorithms, Distributed Systems, Networks and Cloud Computing, Web Development, Object-Oriented Design & Design Patterns

Bachelor of Engineering in Computer Engineering

Savitribai Phule Pune University

Aug 2016 - May 2020

CGPA: 9.04/10

Coursework: Data Structures and Algorithms, Database Management, Computer Networks, Operating Systems

WORK EXPERIENCE

Software Engineer Intern

Ribbon Communications, USA

Sep 2025 - Dec 2025

- Designed and owned a SOC 2-compliant, cloud-native audit logging service on AWS using Python, reliably ingesting and processing high-volume, low-latency logs from distributed microservices
- Built a scalable data processing pipeline using AWS Lambda, Step Functions, Glue, and S3 to convert raw event streams into Parquet datasets, supporting downstream analytics, compliance audits, and traceability
- Developed Python-based AI agent prototypes for incident management, leveraging LLM orchestration and structured prompt engineering to automate fault detection, root cause analysis, and mitigation across distributed services

Software Engineer

Finastra, India

Aug 2023 - Feb 2024

- Developed and optimized 8+ payment workflows using Java and Spring Boot in a distributed microservices architecture, ensuring compliance with CHIPS, Federal Reserve clearing house, which improved transaction efficiency and system reliability under high transaction volumes
- Worked on ISO 20022 migration for FED payments, creating new data schemas, adding required payment fields, and implementing workflow logic to ensure seamless processing and system consistency
- Modernized a monolithic payment system into scalable microservices, using Kafka based event-driven architecture to enable real-time mass payment processing, cutting batch wait time and processing delays by 35-50%
- Collaborated directly with product, client stakeholders, and operations teams to diagnose and resolve high-severity production issues
- Achieved 98% test coverage for new modules by writing unit and integration tests with JUnit and Mockito

Senior Software Engineer

Xoriant Solutions Pvt Ltd, India

Aug 2020 - Aug 2023

- Maintained and optimized large-scale Java and Angular based financial systems handling high-volume transactional data, ensuring reliability and performance in production environments
- Designed and maintained client-specific product workflows, collaborating with stakeholders to deliver reliable production features while managing builds with Git and Gradle in an Agile environment
- Optimized SQL queries and stored procedures over multi-million row datasets to support real-time liquidity monitoring and operational dashboards
- Performed in-depth root-cause analysis on production incidents, driving long-term fixes that reduced recurring defects and operational backlog by 40%

TECHNICAL SKILLS

Programming Languages:	Java, Python, JavaScript, TypeScript, Shell Scripting
Frontend:	React, Redux, Angular, D3.js, HTML5, SASS
Backend:	SpringBoot, Node.js, REST APIs, SOAP Web Services, Kafka
Databases:	MySQL, PostgreSQL, MongoDB, XML, JSON
Cloud & DevOps:	AWS(EC2, RDS, S3, Lambda, ECS, AutoScaling, Step Functions, CloudWatch), Terraform, CloudFormation, Docker, Git
Testing & Tools:	Jest, JUnit, Elasticsearch, IBM MQ, Gradle, Postman

PROJECTS

CloudFileVault: Cloud Native Application | AWS, Node.js, REST API, Jest, Sequelize ORM, MySQL

- Developed a secure Node.js file storage app on AWS (EC2, RDS, S3, CloudWatch) with encrypted access
- Automated infrastructure and deployments with Terraform and GitHub Actions, including IAM, KMS, AMI and AutoScaling setup

Financial Management System | Java, JavaFX, Design Patterns, MySQL

- Built a modular financial management application using Java and JavaFX, supporting budgeting, transaction tracking, and financial analysis
- Applied OOP and design patterns (MVC, Factory) to create scalable components with interactive data visualizations
